To find  $0$ ,  $z$ , and  $r$ .--At the U. S. Naval Observatory all chronometers are subjected to two tests in the temperature room, the variation being from  $90$  F. to  $50$  F. in the first; and from  $50$  F. to  $90$  F. in the second. The chronometer? are exposed in each test for one week to certain predetermined temperatures under certain fixed rules; the errors being determined at the beginning and end of each week, the daily rates for the several temperatures are obtained from them. The data found at the mean temperatures of  $55$ ,  $70$ , and  $85$  F. are used in the general formula for the determination of  $0$ ,  $z$ , and  $r$ , and from these values, a curve is constructed for each chronometer. This curve with rates plotted up to date, known as Form No. 1, or Rate Curve for Temperature at Observatory, accompanies a chronometer when issued. The same record sheet contains Form No. 2, or Rate Curve and Observations on Board Ship, and Form No. 3, or Observed Errors and Mean Daily Rates and...
