RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 40 pages. Original publisher: Reston, Va. : U. S. Geological Survey, 2006. OCLC Number: (OCoLC)65169489 Subject: Groundwater -- Illinois -- Yorkville. Excerpt: . . . Geology 9 Samples from the VAP locations also were collected. Concentrations of each constituent, including field lected using standard low-flow techniques in accordance parameters, detected in water samples from six or more with the USEPA-approved Field Sampling Plan for the monitoring wells during the July 2005 sampling event investigation. Water samples collected from the VAP were plotted against each other, and the square of the 2 locations were collected after purging 3-8 well volumes Pearson product-moment correlation coefficient (  $r$  ) with a bladder pump. Temperature, pH, DO, ORP, and for each plot was calculated by use of Microsoft Excel specific conductance of the water typically were measured. spreadsheet package. Two sets of plots were generated during purging by use of a calibrated in-line flow-ated, one including and one excluding the data from through cell. pH was not measured at VAP1, and pH, wells NL4 and GS4D. Data from wells NL4 and GS4D ORP, and DO was not measured in the deepest interval were excluded because these wells are located directly of VAP2 because the probes were broken. Water sam-hydraulically downgradient from the landfill and correla-ples were collected from VAP locations after monitoring tions excluding these wells are more likely to identify established that the field parameters were changing by chemical processes occurring in the ambient aquifer. A less than 10 percent for every gallon of water purged and high degree of correlation was considered to be present 2 after at least three well volumes were purged. Chlo-if the  $r$  value for the plot exceeded 0. 70 ( Angel Martin, ride and total alkalinity concentrations...
